

## Table of Contents

<b>1. INTRODUCTION</b>	<b>1</b>
1.1. OBJECTIVES OF THE PAPER	1
1.2. THE MDG ON WATER AND SANITATION	1
1.3. THE INTERNATIONAL YEAR OF SANITATION 2008	2
1.4. MONITORING MDG 7 TARGET 10	3
1.5. THE GAP BETWEEN WATER SUPPLY AND SANITATION	4
1.6. THE URBAN/RURAL POPULATION SPLIT AND GROWING SLUMS	6
<b>2. LINKING SANITATION TO HUMAN HEALTH</b>	<b>8</b>
2.1. IMPACTS RELATED TO UNSAFE WATER, POOR SANITATION AND POOR HYGIENE	8
2.2. THE DISEASE BURDEN CAUSED BY LACK OF SANITATION SYSTEMS	10
<b>3. LINKING SANITATION TO FOOD SECURITY</b>	<b>13</b>
3.1. THE AGRICULTURE CHALLENGE	13
3.2. RISING FOOD PRICES AND THE FERTILISER MARKET	14
3.3. THE GEOPOLITICAL PERILS OF FERTILISER AVAILABILITY AND SUPPLY	15
3.4. FUTURE ROLE OF CONSERVATION AGRICULTURE AND PRODUCTIVE SANITATION	18
<b>4. INTRODUCING SUSTAINABLE AND ECOLOGICAL SANITATION</b>	<b>20</b>
4.1. SUSTAINABLE SANITATION	20
4.2. ECOLOGICAL SANITATION	21
4.3. WHO GUIDELINES FOR SAFE REUSE	23
<b>5. POLICY, PLANNING AND IMPLEMENTATION</b>	<b>28</b>
5.1. SANITATION POLICY	28
5.2. SANITATION PLANNING SYSTEMS	29
5.3. IMPLEMENTING IMPROVED SANITATION	31
5.4. CHOOSING APPROPRIATE SYSTEMS	33
<b>6. COSTING THE SCALING-UP TO MEET THE MDG TARGET</b>	<b>37</b>
6.1. COST-BENEFIT ANALYSES	37
6.2. SHORTCOMINGS OF EXISTING COSTING ESTIMATES	39
6.3. COST COMPARISONS	39
<b>7. ACHIEVING SUSTAINABLE SANITATION</b>	<b>42</b>
7.1. KEY DRIVERS	42
7.2. INSTITUTIONAL PLAYERS	42
7.3. CAPACITY DEVELOPMENT	43
7.4. SUANA	45
7.5. FINANCING SANITATION INITIATIVES	45
7.6. OVERALL CONCLUSIONS	50
<b>8. REFERENCES</b>	<b>52</b>

## List of Figures

Figure 1: Global sanitation coverage trends - linear (dotted line) and polynomial trend-lines .....	3
Figure 2: Comparison of 1990 global sanitation coverage estimates .....	4
Figure 3: Improved sanitation coverage in 2006.....	5
Figure 4: Number of toilets per thousand households to be installed through 2015 to meet the MDGs.....	5
Figure 5: Global urban and rural population trends in developing and developed countries. ....	6
Figure 6: Sewage sludge production from public sewerage systems mapped in terms of relative proportion of the global total for 1999 .....	8
Figure 7: Diarrhoea-caused mortality mapped in terms of relative proportion of the global total for 2002	9
Figure 8: Under 5 mortality compared to sanitation coverage for individual developing countries.....	11
Figure 9: Regional rates (red columns) of mortalities per 100,000 persons due to diarrhoea related to water, sanitation and hygiene for 2002.....	11
Figure 10: Regional DALYs per '000 persons due to diarrhoea related to water, sanitation and hygiene in 2002 .....	12
Figure 11: Prevalence of undernourished in developing countries.....	13
Figure 12: World trends in fertiliser use .....	14
Figure 13: Trend in global grain prices in USD per ton.....	14
Figure 14: Costs derived from transport, taxes, overheads, finance costs and margins cause fertiliser to cost much more in the poorest land-locked areas of the world such as Africa .....	15
Figure 15: Diammonium phosphate global bulk price trend .....	15
Figure 16: Mine production of phosphate rock during 2002 and 2007 for the top 4 producers with the price trend for diammonium phosphate (DAP) in USD per ton between 2002 and 2008.....	16
Figure 17: Granular urea US bulk price trend.....	16
Figure 18: Ammonia global bulk price trend .....	17
Figure 19: Geographic distribution of currently economic phosphate rock reserves .....	17
Figure 20: Current and projected supply and demand of phosphate fertiliser in Asia .....	17
Figure 21: Current and projected supply and demand of potash fertiliser in Asia .....	17
Figure 22: Global prices of fertiliser components (USD/ton) .....	18
Figure 23: Potential capacity of ecological sanitation systems to replace chemical fertiliser used in different world regions .....	19
Figure 24: Complete household-based urine-diversion ecosan and eco-water use, closing the nutrient and water cycles .....	22
Figure 25: Maize crop 31 Jan 2005.....	23
Figure 26: Effect of addition of varying amounts of urine on the growth of one maize plant consisting of three cobs over a 3.25 month growth period .....	23
Figure 27: Comparison between chemical nitrogen fertiliser used and potential nitrogen fertiliser derived from sanitation systems .....	24
Figure 28: Rapid increase in sanitation coverage in the southern region of Ethiopia stimulated by activities lead by the Regional Health Bureau .....	33
Figure 29: General cost ladder for various sanitation options .....	41
Figure 30: SuSanA objectives, activities and partners .....	46
Figure 31: National sanitation requirements as number of toilets per thousand households to reach MDG 7 Target 10 in relation to GDP per capita .....	48
Figure 32: Cost for ecological sanitation investments between the period 2003 and 2015 to meet the MDG sanitation target.....	48

## List of Tables

Table 1: MDG linkages .....	2
Table 2: Effects of poor sanitation and hygiene in Ethiopia.....	10
Table 3: Safety guidelines for large-scale treatment systems of greywater, excreta and faecal sludge for use in agriculture .....	25
Table 4: Recommendation for storage treatment of dry excreta and faecal sludge before use at the household and municipal levels without adding new material .....	25
Table 5: Recommended storage times for urine mixture (1) based on estimated pathogen content (2) and recommended crops for larger systems (3) .....	25
Table 6: Health protection measures .....	26
Table 7: Direct and indirect health effects of wastewater, excreta and greywater use .....	26
Table 8: Monitoring and system assessment.....	26
Table 9: Important aspects and considerations of the WHO Guidelines .....	26
Table 10: An overview of different sanitation planning tools.....	30

Table 11: Differences in the definition of improved sanitation in Uganda .....	32
Table 12: Sanitation technologies .....	35
Table 13: Examples of two typical conventional base cases for on- and offsite sanitation systems with examples of both wet and dry improved sanitation options. The various sustainability criteria are listed as a template in order to arrive at possible improvements to the base case. ....	36
Table 14: Examples of annual cost estimates to meet the water and sanitation MDG Target through 2015 .....	38
Table 15: Examples of economic benefits of meeting the water and sanitation MDG Target .....	38
Table 16: Examples of health benefits from water and sanitation improvements .....	38
Table 17: Examples of non-health benefits of meeting the water and sanitation Target of MDG 7 .....	39
Table 18: Some cost comparisons between piped sewerage systems and other systems .....	40
Table 19: Selected cost comparisons between ecological and conventional systems including capital investments and running costs .....	40
Table 20: Tools for capacity development.....	44
Table 21: Annual improvement costs per person reached, nominal 2000 US\$ .....	47
Table 22: GDP, household size and calculation of 1% GDP per household for the 9 MDG regions .....	47

## List of Boxes

Box 1: Key elements of national sanitation policies.....	28
Box 2: Shortfalls in funding in Nepal and Ghana.....	29
Box 3: Generic planning steps .....	31
Box 4: The sanitation vision for Ethiopia .....	34
Box 5: Health benefits of improved sanitation and hygiene .....	37
Box 6: List of websites and electronic newsletters including material on capacity development.....	44
