

Contents

<i>Chapter 1: Introduction</i>	<i>1</i>
1.1 History of the activated sludge process	1
1.1.1 Initial period	1
1.1.2 Biological nitrogen removal	8
1.1.3 Enhanced biological phosphorus removal (EBPR)	15
1.1.4 Integrated EBPR and nitrogen removal	16
1.1.5 Nitrogen removal in sidestream processes	18
1.1.6 Summary	22
1.2 Development of the activated sludge models	23
1.2.1 First period – empirical criteria	23
1.2.2 Second period – steady-state relationships of microbial growth and organic substrate utilization	25
1.2.3 Third period – complex dynamic models	32
1.3 Basic definitions in mathematical modelling and computer simulation	45
1.3.1 System	46
1.3.2 Experimentation	47
1.3.3 Model	48
1.3.4 Advantages and disadvantages of mathematical modelling and computer simulation	55
 <i>Chapter 2: Model building</i>	 <i>57</i>
2.1 Components of a complete model of an activated sludge system	57
2.2 Hydraulic configuration model	58
2.3 Influent wastewater characterization model	60
2.4 Bioreactor model	70
2.4.1 Biokinetic model	70
2.4.2 Hydrodynamic mixing model	76
2.4.3 Oxygen transfer model	86
2.4.4 Process temperature model	98

2.5	Sedimentation/clarification model	118
2.5.1	Solids flux theory	120
2.5.2	Approaches to dynamic modelling clarifier operation	126
2.5.3	Biological processes in the secondary clarifier	131
<i>Chapter 3: Modelling specific biochemical processes</i>		
<i>occurring in activated sludge systems</i>		
3.1	Growth of microorganisms	133
3.1.1	Maximum specific growth rate for heterotrophic biomass, $\mu_{H,max}$	136
3.1.2	Substrate saturation coefficient for heterotrophic biomass, $K_{S,H}$	139
3.1.3	Yield coefficient for heterotrophic biomass, Y_H	139
3.1.4	Correction factors for anoxic kinetics and stoichiometry	141
3.2	Disappearance (loss) of biomass and cell internal components	144
3.3	Storage of substrates	149
3.4	Adsorption of substrates	157
3.5	Hydrolysis of slowly biodegradable organic compounds	161
3.6	Fermentation (conversion of “ <i>complex</i> ” readily biodegradable substrate to VFA)	169
3.7	Nitrification	172
	3.7.1 Modelling nitrification as a one-step conversion	173
	3.7.2 Modelling nitrification as a two-step conversion	180
3.8	Denitrification	184
3.9	Enhanced biological phosphate removal (EBPR)	191
	3.9.1 Mechanism of the EBPR process	191
	3.9.2 Carbon sources and storage products	193
	3.9.3 Anoxic growth of PAO	194
	3.9.4 Approaches to modelling the EBPR process	197
	3.9.5 Effect of GAO metabolism on EBPR	203
3.10	Bulking sludge (growth of <i>Microthrix parvicella</i>)	206
	3.10.1 Conceptual model for <i>M. parvicella</i> in activated sludge	206
	3.10.2 Mathematical model structure for <i>M. parvicella</i> in activated sludge	208
	3.10.3 Kinetic and stoichiometric parameters, temperature effects	209

3.11	Anaerobic ammonium oxidation (Anammox)	211
3.11.1	Approaches to modelling the ANNAMOX process	215
<i>Chapter 4: Organization of a simulation study</i>		221
4.1	Approaches to a systematic organization of the simulation study	222
4.1.1	BIOMATH calibration protocol (Belgium)	226
4.1.2	STOWA calibration protocol (Holland)	228
4.1.3	WERF protocol (USA)	231
4.1.4	HSG guideline (Austria, Germany, Switzerland)	236
4.1.5	JS protocol (Japan)	239
4.1.6	IWA Task Group protocol	241
4.1.7	Summary	244
4.2	Data quality control (collection, verification and reconciliation)	245
4.3	Model calibration/validation procedures	253
4.3.1	Selection of a hydrodynamic mixing model	254
4.3.2	Influent wastewater and biomass characterization	265
4.3.3	Estimation of kinetic and stoichiometric parameters in the biokinetic models	278
4.3.4	Estimation of settling parameters	287
4.3.5	Estimation of the $K_L a$ coefficient	289
4.4	Goodness-of-fit measures	294
4.5	Uncertainty and sensitivity analysis	297
4.5.1	Background	297
4.5.2	Uncertainty analysis	298
4.5.3	Sensitivity analysis	300
<i>Chapter 5: Practical model applications</i>		311
5.1	Introduction	311
5.2	Optimization of process performance	314
5.3	Expansion and upgrade of existing facilities	316
5.4	Design of new facilities	316
5.5	Development of new treatment concepts	317
5.6	Education (training and teaching)	320
5.7	Characteristics of the existing simulator environments	321
5.7.1	ASIM (ETH/EAWAG, Switzerland)	324
5.7.2	BioWin (EnviroSim, Canada)	324
5.7.3	GPS-X (Hydromantis, Canada)	325

5.7.4	SIMBA (IFAK, Germany)	326
5.7.5	STOAT (WRc, UK)	326
5.7.6	WEST (MOSTforWATER, Belgium)	327
