

Testing Diagnostic Tools for Trace Organic Compounds and Multiple Stressors: Case Studies

- Demonstrates potentially useful diagnostic approaches and types of analyses to identify causes of ecological impairments in aquatic systems due to TOrcs, including known endocrine disruptors.
- Identifies critical data needs to evaluate whether TOrcs are causing or could cause biological impairment.
- Provides a conceptual approach for diagnosing aquatic ecological effects due to TOrcs.
- Keywords: Contaminants of emerging concern, trace organic chemical, endocrine disruptors, aquatic ecology, stressor identification.
