

Water and Wastewater Management in the Tropics

Editor(s): Jens Lonholdt

Water and Wastewater Management in the Tropics

provides the necessary conceptual framework and tools to assess all appropriate aspects of water and sanitation projects in developing countries.

Using the lessons learned from courses taught at the Technical University of Denmark, **Water and Wastewater Management in the Tropics** is the concerted effort of a broad team including "hard core" engineers and practitioners as well as "soft core" environmental and institutional planners and economists, with contributions from renowned researchers as well as seasoned project managers.

The first part of the book aims to give a basic understanding of international projects and addresses how to identify, formulate, select, organise, cost, finance, implement and manage water and wastewater management projects in developing countries. Later chapters focus on three different types of water and wastewater management projects in a tropical context: rural water and sanitation; urban water and wastewater management; and, industrial water and wastewater management.

Water and Wastewater Management in the Tropics will appeal to graduate environmental engineering students but also to practitioners, economists, sociologists, and institutional planners working with water and sanitation projects in developing countries.
