

# Urban Hydroinformatics: Data, Models and Decision Support for Integrated Urban Water Management

**Urban Hydroinformatics: Data, Models and Decision Support for Integrated Urban Water Management** is an introduction to hydroinformatics applied to urban water management. It shows how to make the best use of information and communication technologies for manipulating information to manage water in the urban environment.

The book covers the acquisition and analysis of data from urban water systems to instantiate mathematical models or calculations, which describe identified physical processes. The models are operated within prescribed management procedures to inform decision makers, who are responsible to recognized stakeholders.

The application is to the major components of the urban water environment, namely water supply, treatment and distribution, wastewater and storm water collection, treatment and impact on receiving waters and groundwater, and urban flooding. **Urban Hydroinformatics** pays particular attention to modeling, decision support through procedures, economics and management, and implementation in developing countries.

The book is written with Post-graduate students, researchers and practicing engineers in all aspects of urban water management in mind.

## Contents:

The Imperative for Urban Water Management  
Urban Water Systems  
Hydroinformatics  
Data Management  
Modelling Paradigms  
Decision Support Systems  
Involving Society in Urban Water Management  
Asset Management  
Water Distribution systems  
Collection Systems  
Wastewater Treatment  
Management of Water Quality in Integrated Drainage Systems  
Urban Flood Risk Management  
Management of Urban Water in Developing Countries  
Future of Urban Water Management  
Glossary  
Index

**This title format has been revised: previous ISBNs for the print book were 9781843392743 and 9781780401362.**
