

SARS-CoV-2 in Water

Editor(s): Eiji Haramoto, Gertjan Medema, John Scott Meschke, Susan Petterson

This book brings together cutting-edge studies and reviews on the water-related health aspects of SARS-CoV-2, contributed by our research community. The contributions are related to the potential risk of waterborne COVID-19 transmission, household water uses, and hygiene during the pandemic, and surveillance of SARS-CoV-2 RNA in wastewater.

In Focus – a book series that showcases the latest accomplishments in water research. Each book focuses on a specialist area with papers from top experts in the field. It aims to be a vehicle for in-depth understanding and inspire further conversations in the sector.
